under monitorship of the man computer functions task personnel of the system development corporation and the u s army behavioral science research laboratory jointly conducted a study to evaluate three computer compatible methods of identifying the image interpretation reference keys most pertinent to a given identification problem thirty two enlisted image interpreters having training experience with imagery showing foreign terrain and targets were subjects for the study simulated computer procedures were devised in which the interpreters selected target signatures appearing on checklists

as a means of designating the target category and finally the key or keys desired results of the experiment showed 1 target identification by means of a reference key was as fast and as accurate with computer compatible procedures of key selection as with the manual procedure 2 interpreters tended to base selection of a key on only one or two signatures even when use of additional signatures would have increased probability of valid key selection 3 interpreters preferred viewing more than one key before final identification of a target 4 no significant differences in speed and accuracy of identification were found under any of the procedures when using the two levels of imagery quality

citrix presentation server allows remote users to work off a network server as if they weren't remote that means incredibly fast access to data and applications for users no third party vpn connection and no latency issues all of these features make citrix presentation server a great tool for increasing access and productivity for remote users unfortunately these same features make citrix just as dangerous to the network it's running on by definition citrix is granting remote users direct access to corporate servers achieving this type of access is also the holy grail for malicious hackers to compromise a server running citrix presentation server a hacker need not penetrate a heavily defended corporate or government server they can simply compromise the far more vulnerable laptop remote office or home office of any computer connected to that server by citrix presentation server all of this makes citrix presentation server a high value target for malicious hackers and although it is a high value target citrix presentation servers and remote workstations are often relatively easily hacked because they are often times deployed by overworked system administrators who haven't even configured the most basic security features offered by citrix the problem in other words isn't a lack of options for securing citrix instances the problem is that administrators aren't using them

eweek october 2007 in support of this assertion security researcher petko d petkov aka pdp said in an oct 4 posting that his recent testing of citrix gateways led him to tons of wide open citrix instances including 10 on government domains and four on military domains the most comprehensive book published for system administrators providing step by step instructions for a secure citrix presentation

server special chapter by security researcher petko d petkov aka pdp detailing tactics used by malicious hackers to compromise citrix presentation servers companion site contains custom citrix scripts for administrators to install configure and troubleshoot citrix presentation server

in keeping with past trends full migration to this latest microsoft server operating system will begin in earnest 12 months after its release in mid to late 2004 this book will hit the market just as large enterprises begin the process of moving from windows 2000 server to windows server 2003 the title says everything you need to know about this book no other book on the market combines this breadth and depth of coverage with the kind of product expertise and quality standard expected from syngress every aspect of planning installing configuring and troubleshooting a windows server 2003 network is distilled and documented with plenty of examples and illustrations an unlike its competition this is a book that was written from the ground up for windows server 2003 everything a system administrator will ever need to know about running a windows server 2003 network this is the book that meets the needs of today s windows server 2003 professional every aspect of planning installing configuring and troubleshooting a windows server 2003 network is distilled and documented with plenty of examples and illustrations

in this provocative and readable volume eleven leading constitutional authorities challenge business as usual in american foreign policymaking for far too long they contend americans have acquiesced to presidential claims to sweeping executive powers in foreign affairs thanks to imperial minded presidents a weak willed congress and neglectful scholars

these authors forcefully argue that the president is not the supreme crafter of foreign policy and that congress must provide more than a rubber stamp for the president s agenda unilateral presidential control of foreign relations they warn can pose a grave threat to our nation s welfare and is simply without constitutional warrant combining constitutional theory with keen historical insights these authors illuminate the roots of presidential abuse of executive power and remind us of the past and potential costs of such disregard for our unique system of checks and balances an essential guide for all concerned citizens and members of congress this volume should help revive a proper understanding of this crucial dimension of american democracy

organizations such as the sierra club and friends of the earth are familiar to anyone with an interest in environmental protection as activist groups they played by the same rules for years but in 1994 the rules changed with the republican takeover of congress environmental groups faced sweeping changes in federal policies that threatened the enforcement of environmental laws as these organizations intensified their efforts to meet these challenges they also altered their electoral strategies and political spending patterns this book traces those actions and shows what they mean for the future of environmentalism in the political arena while environmental advocacy groups have become bigger and better funded in recent years so have the corporate interests that compete with them for the attention of public and politicians the green agenda in american politics offers a new look at environmental advocacy that focuses on contemporary lobbying electioneering and agenda setting in this new context drawing on interviews with activists from a wide range of organizations robert duffy describes what environmental groups actually do when lobbying officials or the public he

examines activity at both national and state levels to emphasize their growing use of websites email and action alert networks to conduct more sophisticated grassroots campaigns and he shows how they are devoting more funds to unregulated forms of spending such as independent expenditure issue advocacy advertising and public education campaigns duffy also tracks emerging trends in interest group politics and provides an overview of activism through the early 1990s he then documents the emergence of more aggressive action after 1994 such as providing campaign services to candidates and mounting voter registration drives he also shows how state and local groups have begun to play more important roles in the wake of the rollback of federal environmental regulations brimming with new insights into interest group lobbies in general and contemporary environmental groups in particular duffy s book opens a new window on the influence of big money in the supposedly democratic electoral process
